pamela.collom@med.monash.edu.au

Call for Abstracts:

Date extended until 10 August

Please go to www.med.monash.edu.au/cmhse/hphse.html
for details of how to submit.

Educational research and innovation provides an opportunity for educators to extend their practice based on latest theory and evidence; and for researchers to understand the critical issues that shape the future healthcare and health sciences workforce. Sharing advances can be difficult for isolated educators, clinicians and researchers. The 2009 symposium seeks to both support and understand the culture of educational research.

This full day symposium includes: a key note speaker on developing educational research in the health professions/ health sciences; a debate about the culture of HPHSE research; a researchers’ showcase of current educational research and innovation within Monash University. In the afternoon, participants will be asked to participate in the discussion about direction, prioritisation and support for HPHSE Research, including links and gaps between educational theory, practice and research.

If you are an academic, clinical educator or educational researcher this symposium will be of interest. It will provide insights, promote networks and share opportunities across the community of health professions and health sciences education and research.

8.45–9.00 am	Registration
9.00–9.30 am	Welcome and Introduction–Professor Phil Steele PVC
